## **DETAILED ACTION**

Applicant is advised that the Examiner assigned to this Application has changed. The Examiner currently assigned to this Application is **Eric Silverman**, **PhD**, whose contact information can be found at the end of this action. Applicant is further advised that this Application is currently assigned to **Art Unit 1615**.

Receipt of Amendment and Request for Continued Examination is acknowledged. After amendment, claims 57, 59-64, 66-175 are pending.

## Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 57, 59 64, drawn to a method of loading an active agent into a lipsome, classified in class 424, subclass 9.321.
- II. Claims 66 69, drawn to a liposome, classified in class 424, subclass 450.
- III. Claims 70 93, drawn to a method of delivering an active agent, classified in class 424, subclass 9.321.
- IV. Claims 93-136 and 166-170 drawn to a liposome and a pharmaceutical composition comprising said liposome, classified in class 424, subclass 450.
- V. Claims 137 165, drawn to a method of administering an active agent, classified in class 424, subclass 9.321.

Claims 170-175 link groups II and III. If group II or III is elected, these claims will be examined along with the elected group.

The inventions are distinct, each from the other because of the following reasons:

**Art Unit: 1615** 

Inventions I is related to Groups II and IV as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the method of Group I can be used to make two materially different products, the product of Group II or that of Group IV.

Inventions I is related to Groups III and V as directed to related processes. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, the processes have mutually exclusive method steps, in that Group I has steps relating to administration of a product, whereas Groups III and V have steps relating to the use of that product. As such, they have materially different functions, wherein the process of Group I makes a liposome and the processes of Groups III and V administer an agent.

Inventions II and IV are each related to Inventions III and V as products and processes of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In

Art Unit: 1615

the instant case each of the processes can be practiced with more than one materially different product, namely the products of Groups II or IV. In addition, each product can be used in at least two materially different processes, namely the process of III or V.

Inventions II and IV are directed to related products. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, the recited second components of the two inventions are different. As such, the inventions have different compositions, and thus must have a different mode of operation, since the mode of operation is clearly dependant on the composition. In addition, since the compositions are different, the inventions are mutually exclusive.

Inventions III and V are directed to related distinct processes. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, the methods are related to processes of delivering liposomes. However, the liposomes delivered by the processes are not the same. Thus, the processes are mutually exclusive, cannot be used together, and have different effects.

**Art Unit: 1615** 

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Because examination of more than one of the abovementioned inventions would constitute a serious burden on the office, restriction for examination purposes is proper.

The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder. All claims directed a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. Failure to do so may result in a loss of the right to rejoinder. Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.

This application contains claims directed to the following patentably distinct species: different second components. The species are independent or distinct because each has a different chemical structure and physical properties, and as such imparts distinct characteristics on the invention.

Applicant must elect one second component from the following claimed second

components:

1) bile acids

2) myristoyl surfactants

3) palmytoyl surfactants

4) glyceryl monooleate

5) PEG-ceramides

6) C18-ether linked lysophspatidyl choline

7) polyethyleneglycol-polyethylene copolymers

8) fatty acids

9) dichain phospholipids

10) lysolipids

11) an active agent

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for

prosecution on the merits to which the claims shall be restricted if no generic claim is

finally held to be allowable. Currently, at least claim 57 is generic.

Applicant is advised that a reply to this requirement must include an identification

of the species that is elected consonant with this requirement, and a listing of all claims

readable thereon, including any claims subsequently added. An argument that a claim

is allowable or that all claims are generic is considered nonresponsive unless

accompanied by an election.

**Art Unit: 1615** 

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

This application contains claims directed to the following patentably distinct species: different active agents. The species are independent or distinct because each active agent is used for different purposes, and thus the species are mutually exlusive.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, at least claim 67 is generic.

Applicant must elect one of the following active agents:

- 1) antihitamines
- 2) antineoplastic or antitumor agents
- 3) paclitaxel
- 4) camptothecin
- 5) doxorubicin
- 6) NSAID's

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims

**Art Unit: 1615** 

readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

Because this requirement is complex, an election over the telephone was not solicited.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of

**Art Unit: 1615** 

record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eric E. Silverman, PhD whose telephone number is 571 272 5549. The examiner can normally be reached on Monday to Friday 7:30 am to 4:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thurman K. Page can be reached on 571 272 0602. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
